How to Apply CSS and Other Advanced Website Features

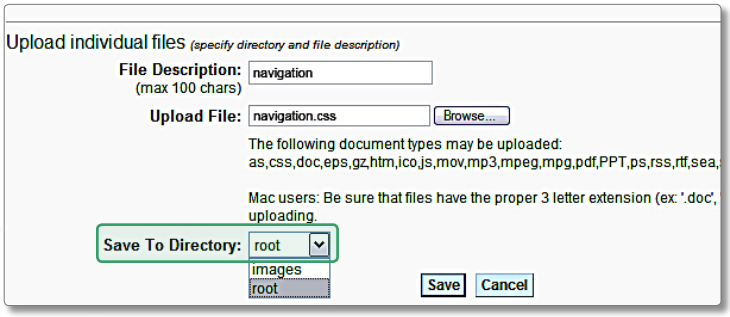
This is for advanced website users. If you have CSS, HTM, SWF or other documents that you would like to apply to your website, this guide will instruct you how to upload those files and apply them in the DistributorCentral website editor.

Go to http://advanced.dcdistributordemo.com to see an example website created with CSS in DistributorCentral.

Upload Your CSS Files

- Go to the **Websites Menu** and select **Add/Edit Websites**
- Click on the **Edit** link for the site you need to modify
- Then click on the **Content Libraries** link
- Select the **Documents** tab and then click on the **Add New Document** link
- Upload your files in the bottom portion of the page and make sure to select **Root File** in the **Save to Directory** area (See Figure >>)

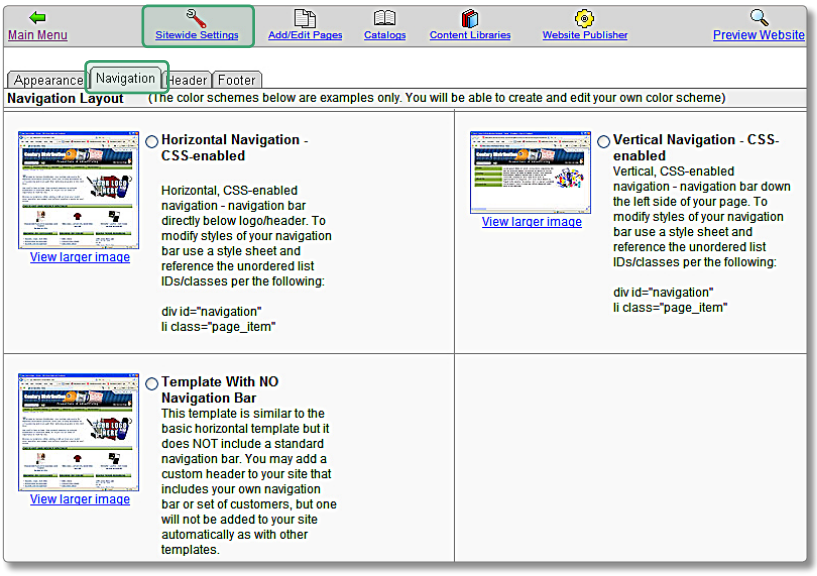
* This is the same procedure that you will use for uploading SWF (Flash), HTM and other document files



Select a CSS Enabled Navigation Layout

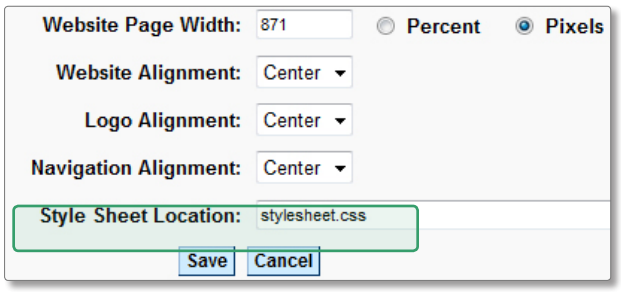
DistributorCentral has two CSS enabled navigation layouts as well as a template with no navigation. Follow these steps to select the navigation for your website.

- Go to the **Sitewide Settings** area
- Select the **Navigation** tab
- Scroll down toward the bottom of the page and select either the **Horizontal** or **Vertical** CSS enabled layout or the **No Navigation** template. (See Figure >>)



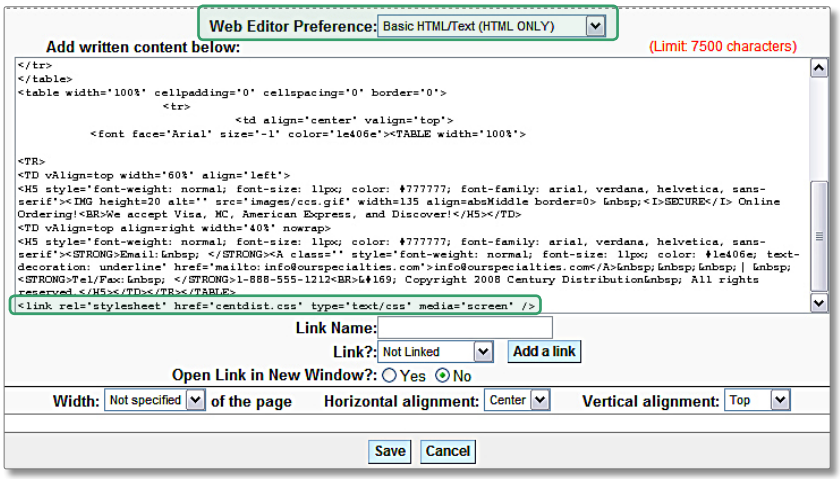
Reference The Style Sheet

- Go to the **Sitewide Settings** area
- Click on the **Edit** link for the active color scheme
- Enter in the CSS document name in Style Sheet Location Field
- Then click on **Save** (See Figure ⩛)



You can also reference CSS documents by adding a link into **Written Content** blocks using the **Basic HTML/Text** preference.

- To do this, you' would need to insert a link tag similar to the example below (See Figure ⩛):

```
<LINK href="http://www.distributorcentral.com/websites/mywebsite/mystylesheet.css" type=text/css rel=stylesheet>
```


This is the same procedure that you will use for linking SWF (Flash), HTM and other document files
